

The test uses this window into which you will make your equation graphs.  
You may print this out and use it to practice graphing some equations from the chapter 4 reviews.  
On the test the directions will say:

**Show your work to find the amplitude, period and phase and vertical shifts.**  
**Label axis so the amplitude, period, phase, vertical shifts and tick marks are easy to read.**  
It will be up to you to determine the values of the tick marks within the box.
